How can an exclusion be known and established?
—Kumārila’s critique of apoha and Śāntarakṣita’s reply

Kyushu University SIN LongYin

Introduction

As is well known, a considerable part of the *pūrvapakṣa* section of *Tattvasaṃgraha* (TS) Chapter 16 (Śabdārthaparīkṣā, “the Examination of the Meaning of Words”) corresponds to the Apohavāda Chapter of Kumārila’s *Ślokavārttika* (ŚV), in which Kumārila offers extensive and systematic critiques of the *apoha* theory. Two of the arguments launched by Kumārila and Śāntarakṣita’s responses to them in the *uttarapakṣa* section are discussed in Sin (2024), where I focus on the verses alone and explore the philosophical significance of the debates. In this paper, I pursue further study of the same topic by examining Kamalaśīla’s *Tattvasaṃgrahapañjikā* (TSP) and surveying the commentaries of ŚV. Below is an overview of the two debates.

The first debate consists of TS 933–935 / ŚV Apohavāda 73–75 (= *pūrvapakṣa*) and TS 1051–1056 (= *uttarapakṣa*), which concerns the knowing of an exclusion (*apoha*). *Apoha* theorists proclaim that an exclusion is known either through a word (*śabda*) or through an inferential mark (*liṅga*).¹ Targeting this point, Kumārila criticizes the *apoha* theory by questioning how an exclusion can ever be known. His strategy is to show that a positive concomitance (*anvaya*), which is generally considered as a prerequisite of the operation of words and inferential marks, is impossible under the Buddhist ontology which only admits unique particulars; and hence one can never—by any means—apprehend or know an exclusion, given this nominalist ontology (TS 933–934 ≈ ŚV Apohavāda 73–74). And then, Kumārila deals with the following objection: positive concomitance in fact plays no significant role, for, an object is made known by words or inferential marks through mere non-observation (*adarśanamātra*).² This objection can be attributed to Dignāga, according to whom an object is conveyed by words through non-observation—viz., the word “X” has never been observed applied to any non-X. Kumārila replies that non-observation cannot serve as the ground of knowing anything, because as being omnipresent (*sarvatra*), it can never differentiate Xs from

¹ On the attribution of this proclamation, see Pind (2015, p.127, fn. 431), and Kataoka and Taber (2021, pp. 98–99, fn. 40).

² It is worth noting that Kumārila here subtly shifts the topic from knowing an exclusion to knowing something (namely, an object) through an exclusion.

non-Xs (TS 935 ≈ ŚV Apohavāda 75). Śāntarakṣita's response is that a positive concomitance is in fact possible under the Buddhist ontology which only admits unique particulars (TS 1051). To explain, a unique particular—whose difference (*bheda*) is not intended—is an entity in general (*vastumātra*), and this is exactly what a general property (*sāmānyalakṣaṇa*) is for the *apoha* theorists (TS 1056). He also demonstrates how an entity in general can in fact fulfill the roles which the Indian realists believe that only a real universal can play: it can explain [a] the inferring of the presence of fire from the presence of smoke (TS 1052–1053), as well as [b] the inferring of something's being impermanent from its being existent (TS 1054–1055), which are referred to by Kamalāśīla as *kāryahetu* (effect-reason) and *svabhāvahetu* (essence-reason) respectively.

The second debate consists of TS 936–937 / ŚV Apohavāda 76–77 (= *pūrvapakṣa*) and TS 1057–1058 (= *uttarapakṣa*), which concerns the establishment of an exclusion. *Apoha* theorists maintain that a word “X” makes one understand something as X through the exclusion of non-X. For instance, the word “cow” makes one understand an object as a cow by excluding non-cows such as horses. Thus, Kumārila criticizes the *apoha* theory by questioning what the basis of establishing an exclusion is—namely, what is the cause of excluding the non-X?³ His strategy is to show that the establishment of the exclusion of non-X—only with respect to Xs, but not non-Xs—presupposes a real resemblance (*sārūpya*) among Xs (TS 936 = ŚV Apohavāda 76); and this real resemblance can only be explained in terms of real universals, but not difference (TS 937 = ŚV Apohavāda 77). Hence, if there were no real universals as proclaimed by the *apoha* theorists, then, no exclusion could be established at all. To reply, Śāntarakṣita offers a *tu quoque* argument: if for the *apoha* theorists, the establishment of the exclusion only with respect to Xs requires an explanation, then for Kumārila, the abiding of the universal “X-ness” only in Xs—but not non-Xs—too, requires an explanation (TS 1057). He further argues that if Kumārila attempts to explain this by the manifestation of the universal “X-ness” only in Xs but not in non-Xs, then, by the same logic, the *apoha* theorists can also explain that by the fact that only Xs—but no non-Xs—have the capacity of producing the same judgment (*tulyapratyavamarśa*) (TS 1058). To conclude, the establishment of the exclusion is not based on a real universal, but rather, the taking place of the same judgment (TS 1059).

The aim of this paper is twofold. First, to summarize and clarify these two Kumārila-Śāntarakṣita debates on *apoha* by surveying the commentaries on the ŚV and the TS. And second, to produce a scholarly annotated English translation of TS(P) 933–937 and TS(P)

³ On the cause of exclusion in Dignāga's *apoha* theory, see Kataoka (2016); for its philosophical implications, see Sin (2023).

1051–1059, thereby making the philosophical debate it contains accessible to students and scholars of philosophy with no prior knowledge of Sanskrit. It would be fruitful to pursue further study on [i] evaluating the soundness of Kumāṛila’s arguments and Śāntarakṣita’s refutations, and [ii] comparing how other *apoha* theorists, such as Dharmottara, Karṇakagomin, and Ratnakīrti, would account for the knowability and the establishment of exclusions. These tasks, nonetheless, are beyond the scope of this paper.

Translation and explanatory notes

Pūrvapakṣa

And also, you consider that an exclusion is conveyed only through words or inferential marks. But without a real universal (*vastubhūtasāmānyam*), there could not be the functioning of these words and inferential marks. Therefore, how would an exclusion be conveyed? To show this (= to explain this objection), beginning with “*na cānvaya*,” [Kumāṛila says]:

Moreover, without a positive concomitance (*anvaya*), there can be no functioning of words or inferential marks. And without them (word and inferential mark), there can be no [understanding of] an exclusion.⁽ⁱ⁾ But there can be no positive concomitance with regard to what is unique (*asādhāraṇe*).⁽ⁱⁱ⁾ (TS 933) (= ŚV Apohavāda 73)

“**Without a positive concomitance**” (*anvayavinirmuktā*) means “**Without a positive concomitance**” (*anvayam antareṇa*). “[Without] **them**” means “without words and inferential marks”—[then, there would be] no exclusion. [The word] “is understood” should be supplied. If [one objects that] on the basis of the positive concomitance with the unique particular alone, there can be **the operation of words or inferential marks**.⁴ [To reply to this objection, Kumāṛila] said “*na cāsādhāraṇe ’nvayaḥ*.” A unique particular (*svalakṣaṇam*) is **unique**—viz., not shared with anything else. How then can there be a positive concomitance [of something] with it? Hence, under [your] postulation of *apoha*, there could not be any (*eva*) functioning of words or inferential marks. (TSP 933)

Explanatory notes:

⁴ Literally, “the operation of words or inferential marks will be made [by someone], after the positive concomitance with the unique particular alone being accomplished.”

(i): Sucarita formulates this as a problem of mutual dependence (*itaretarāśraya*)—namely, the functioning of words and inferential marks depends on the settlement of *apoha*; and the settlement of *apoha*, in turn, depends on the functioning of words and inferential marks.⁵

(ii): Pārthasārathi associates this verse with the issue of the categorization of things—viz., how the boundary between Xs (*sajātīya*, the similars) and non-Xs (*vijātīya*, the dissimilars) is delimited. Accordingly, for realists like Kumārila, this is easy to explain: a universal is perceptible, hence, those things in which the universal is perceived (“observed”) are classified as “X,” whereas those in which it is not perceived are classified as “non-X.”⁶ On the other hand, an *apoha* can neither be known through direct perception, nor can it be known through words or inferential marks as proclaimed by the *apoha* theorists (for the reasons explained in the verse). It follows that an *apoha* cannot be known (“observed”) in any way, and therefore, categorization of things is just impossible under the *apoha* theory.⁷

Or, let it be the case that there could be the functioning [of words and inferential marks], but still, their acknowledged validity (*prāmāṇyam*) is undermined. To show this, beginning with “*apohaś ca*,” [Kumārila] says:

And an exclusion is not there (*aniṣpannaḥ*), then, you should tell with reference to what the concomitance could be asserted (*kathyatām*).⁸ And if that [concomitance] is not observed, then they (word and inferential mark) would not be the valid means of knowing [the inferential object, namely, the exclusion]. (TS 934) (≈ ŚV Apohavāda 74)

When there is no deviation from the thing to be conveyed, there would be the validity of words and inferential marks; and you consider that **an exclusion** is the thing to be conveyed. And since [an exclusion] is by nature a nonexistence (*abhāvarūpatvāt*), it is **not there**, namely, it is devoid of its inherent nature (*niḥsvabhāvaḥ*).⁽ⁱⁱⁱ⁾ And hence, **with reference to what** object **could the concomitance**—viz., the invariable relation (*avyabhicāritvam*), of words and

⁵ Kās: *apohasiddhyā ca śabdalingayoh pravṛttiḥ sidhyati, tatpravṛtṭyā cāpohasiddhir itītaretarāśrayam iti bhāvaḥ*|

⁶ NRĀ: *jātir hi pratyakṣā, sā yeṣu dṛśyate te samānajātīyāḥ, yeṣu tu na dṛśyate, te vijātīyāḥ, iti śakyam vivektum*|

⁷ NRĀ: *apohaḥ tv apratyakṣaḥ kevalam śabdalingāvaseyaḥ, [...] ato 'pohasyādṛṣṭatvāt tannibandhanaḥ sajātīyavijātīyavibhāgo na sambhavati*||

⁸ ŚV Apohavāda 74 reads *dṛśyatām*.

inferential marks **be asserted**? If [one asks] “why (for what purpose) is that [concomitance] to be asserted?” [To answer this question, Kumāṛila said] “*tasmin*” and so forth. “**That**” (*tasmin*) refers to the concomitance. “**They**” (*taṣoḥ*) refers to words and inferential marks. Because the validity [of words and inferential marks] is by character non-belying (*avisamvāda*). (TSP 934)

Explanatory note:

(iii): Kamalaśīla’s interpretation of *aniṣpanna* is different from the one offered by the other commentators. *Aniṣpanna* here (TSP 934) means “not there,” and an *apoha* is not there because it is by nature a nonexistence (*abhāvarūpatvāt*). This obviously refers to Kumāṛila’s characterization of *apoha* as a nonexistence, according to which an *apoha* is by nature a mutual nonexistence (*anyonyābhāva*), because the exclusion of a horse and so forth with regard to a cow is equivalent to the nonexistence of a horse and so forth in a cow, which is a standard example of mutual nonexistence. And this characterization is succinctly summarized by Kamalaśīla in TSP 915 (*agonivṛttiś cānyonyābhāvaḥ, tasyā aśvādivyavacchedarūpatvāt*). On the other hand, in the commentaries by Sucarita, Pārthasārathi, and Jayamiśra, *aniṣpanna* means “not completed” or “not established.” Accordingly, an *apoha* is “not completed” before the functioning of words and inferential marks or before the apprehension of the concomitance.⁹ And this is because, as mentioned by Sucarita’s commentary on k. 73 (see fn. 5), the settlement of *apoha* depends on the functioning of words and inferential marks. To summarize, Kamalaśīla takes *aniṣpanna* as an ontological notion—concerning the ontological status of *apoha*, whereas for Sucarita, Pārthasārathi, and Jayamiśra, it is an epistemic notion—regarding the validation of *apoha*.

It may be objected that, the concomitances of words and inferential marks are not grasped, [but still], the thing itself could be made known just through the mere non-observation (*adarśanamātreṇa*) [of them] in the dissimilars.^(iv)

[To reply to this objection,] beginning with “*na cādarśanamātreṇa*,” [Kumāṛila] says:

⁹ Kāś: *apohas tu śabdalingappravṛtteḥ prāg aniṣpanna eveti*; NRĀ: *tena cānvayāgrahaṇe ’pohaḥ katham anumīyeta, na cāpohenānvayagrahaṇaḥ sambhavati, tasya prāg anvayagrahaṇādiniṣpannatvāt*; Śar: *na ca tac chabdalingapratipatteḥ pūrvam niṣpannam asti*.

And they (word and inferential mark) would not convey anything by mere non-observation.^(v) It is because non-observation is omnipresent (*sarvatra*), [therefore if word and inferential mark would convey something by mere non-observation, then] the cognitions (*pratyayaḥ*)¹⁰ [of the conveyed things] could not be differentiated (*na viśiṣyate*)¹¹ [from one another]. (TS 935)
(≈ ŚV Apohavāda 75)

[The word] “mere” is used to exclude the observation of positive concomitance.

[Question:] Why would not [words and inferential marks convey anything by mere non-observation]?

[To answer this question, Śāntarakṣita said] “*sarvatraiva*” and so forth.

“Omnipresent” (*sarvatra*) means with respect to the similars, dissimilars and its own object. And therefore, the cognitions—viz., awareness (*jñānam*)—“this is the object of its own,” “this is the object of another [word]” **could not be differentiated** [from one another]. [A word] also could not make known/convey its own object, **because there is the non-observation** with respect to that [own object] too, just as with respect to the object of another [word]. Somewhere [else—in ŚV *Apohavāda* 75], it reads “*pratyāyyaḥ*.” In that case, it means that “the conveyed (*pratyāyyaḥ*)—viz., denoted (*abhidheyaḥ*)—things could not be differentiated (*viśiṣyate*) [from one another].”^(vi) Thus, since it absurdly follows [from your *apoha* theory] that the acknowledged operations and validity of words and inferential marks would be lost, an exclusion cannot be the meaning of words. (TSP 935)

Explanatory notes:

(iv): Jayamiśra formulates the Buddhist objection in the following alternative way: the problem you mentioned in kk. 73–74 only applies for those who maintain that *anvaya* is primary; but for those (that is, for us) who maintain that *vyatireka* is what is primary, it does not apply. For, what does the observation of *anvaya* serve to explain?¹² On whether *anvaya*—apart from *vyatireka*—also contributes to the determination of the reference of words, see Kataoka/Taber 2021, 239–240.

¹⁰ ŚV *Apohavāda* 75 reads *pratyāyyam*.

¹¹ ŚV *Apohavāda* 75 reads *nāvaśiṣyate*.

¹² Śar: *yadi tv evaṃ ucyate—anvayapradhānavādināṃ bhavaty ayaṃ doṣaḥ | vyatirekapradhānavādināṃ tu kiṃ anvayadarśanena |*

(v): For Dignāga, a word (*śabda*) functions in the same way as an inferential mark (*liṅga*) is, namely, both conveys their objects by means of exclusion. This is succinctly summarized by Sucarita as follows: the word “cow”—that is excluded from horses etc., on account of the non-observation of the application of it to horses, etc.—conveys a cow; and likewise, a sign—that is excluded from dissimilar instances—conveys its object to be proved (*sādhyaṛtha*).¹³ The former refers to the *vyatireka* condition of the *apoha* theory, and the latter refers to the *vipakṣe asattva* condition of the *trairūpya* theory.

(vi): The reading of TS 935d (*pratyayo na viśiṣyate*) suggests that the issue at stake is an epistemic one—namely, the cognition of X₁, that of X₂, that of X₃, and so forth (where X₁, X₂, X₃, ... X_n are the things conveyed by *śabda* or *liṅga*) cannot be distinguished from one another. But apparently, in Kumāṛila’s original statement (ŚV Apohavāda 75d: *pratyāyyam nāvaśiṣyate*), the issue is a linguistic one—namely, nothing is left to be conveyed by *śabda* or *liṅga*. So, to accommodate TS 935d with the original statement, Kamalaśīla here offers this strained interpretation, which is obviously not what is intended by Kumāṛila. According to Sucarita and Pārthasārathi, the idea in ŚV 75cd is as follows: the non-observation of the word “cow” takes place not just with respect to horses, etc. but also to cows, hence, cows too—just as horses, etc.—are also excluded. And therefore, there is nothing left to be conveyed by the word “cow.”¹⁴

It has been said [in TS 931] that “*na cāprasiddhasārūpyān*” and so forth.^(vii) Anticipating the objection from the other (= the objection offered by the *apoha* theorist), beginning with “*athāsaty api*,” [Kumāṛila] says:

If there could be a postulation (*kalpanā*) of *apoha* even though there is no resemblance [among any individuals], then, why is the *apoha* of non-cows not postulated for [both] cows and horses [but only for cows]?^(viii) (TS 936)
 (= ŚV Apohavāda 76)

¹³ Kāś: *anyavyāvṛttimukhena śabdaliṅgābhyām svārthaḥ pratyāyyate* [...] *agorūpebhyo 'śvādibhyo 'vṛttidarśanena vyāvṛtto gośabdo gām gamayīṣyati, liṅgaṃ ca vipakṣād vyāvṛttaṃ sādhyārtham iti*.

¹⁴ Kāś: *yathā khalv aśvādiṣu gośabde na dṛṣṭa iti tān na pratyāyayati, evaṃ gavy apy adṛṣṭapūrvō na gām gamayet*; NRĀ: *yathaiva hi gośabdo 'śvādiṣv agoṣu adṛṣṭas tadvyāvṛttim gamayati, evaṃ gavy apy adṛṣṭa iti tān api vyāvarttayan na kiñcit pratipādayed iti*||

If **there could be the postulation of the exclusion** of non-cows with respect to a spotted cow and so forth [even if] there is no **resemblance** [among any individual cows], then, because [the difference from a spotted cow]¹⁵ is common (*aviśeṣāt*) for both [cow and horse], **why could not** [the exclusion of non-cows] **be postulated for both cows and horses?** Because of forgetting the grammatical rule “*gavāśvaprabhṛtīni ca*” [in *Aṣṭādhyāyī* 2.4.11¹⁶], it is spoken as “*gavāśvayoḥ*” [here] by the “learned” one (= Kumāṛila). (TSP 936)

Explanatory notes:

(vii): In TS 931 (= Apohavāda 71), Kumāṛila argues that individual cows cannot be the substrata of the exclusion of non-cows, because this requires real resemblance among the cows, which is not accepted by the *apoha* theorist. Kamalaśīla here considers this verse (TS 936 = Apohavāda 76) as a further elaboration on that, and so does Sucarita.¹⁷ On the other hand, Pārthasārathi, once again, associates this verse with the issue of the categorization of things—viz., how the boundary between the substrata of exclusion (*apohādhāra*, Xs) and the excluded things (*apohya*, non-Xs) is delimited.¹⁸

(viii) The main point here is that the establishment of exclusion of non-X presupposes real resemblance among Xs. For instance, the exclusion of non-cows has real resemblance among cows as its prerequisite. And real resemblance is impossible without real universals. So, for the *apoha* theorists, who do not accept the existence of real universals, there can be no establishment of any exclusion.

To show (elaborate) this very non-specificity (*aviśeṣam*) (meaning: being the same for both a cow and a horse), beginning with “*śābaleyāc ca*,” [Kumāṛila says]:

And the difference from a spotted cow is the same for both a black cow and a horse.^(ix)

Then, if no other general property (*sāmānyam*) is admitted, with reference to what does

¹⁵ Supplied based on TS(P) 937: *tam evāviśeṣam darśayati—śābaleyāc cetyādi| śābaleyāc ca bhinnatvaṃ bāhuleyāśvayoḥ samam| [...]*

¹⁶ A 2.4.11: *gavāśvaprabhṛtīni*.

¹⁷ Kāś: *evam hi prāg uktam| nāprasiddhasārūpyāḥ śābaleyādayo 'pohaviśayatayāvasātum śakyanta iti|*

¹⁸ NRĀ: *keṣāñcid apohatvaṃ keṣāñcid apohādhāratvaṃ kalpayet, [...] tad eva śākyamate tād apohasya kenacid apy adṛṣṭatvān na tannibandhanam sajātīyavijātīyatvakalpanam ity uktam||*

the *apoha* of non-cows take place?^(x) (TS 937)

(= ŚV Apohavāda 77)

By “with reference to what does the *apoha* of non-cow take place?” is meant that just as [the *apoha*] does not **take place** with reference to **a horse** on account of [a horse’s] difference **from a spotted cow**, likewise, since **a black cow** too is different from that (viz., from a spotted cow), [the *apoha*] would not **take place** with reference to it (a black cow) either. The same logic applies to a spotted cow and so forth too, because the difference is common to all [individuals/cases]. (TSP 937)

Explanatory notes:

(ix): Sucarita considers k. 37ab as a reply to the following Buddhist objection: the particulars which are perceived with the form of *śābaleya* can serve as the substrata of the exclusion.¹⁹

And the reply to this is that if this were so, a *bāhuleya* would also be the objects excluded by the word “cow,” because it is not perceived with the form of a *śābaleya*.²⁰ A similar argument is offered by Kumārila in Apohavāda 3cd–4ab (*tathā ca śābaleyādir asāmānyaprasaṅgataḥ || śābaleyādirūpaṃ hi na sāmānyam parasparam*), according to which a *śābaleya* cannot serve as the substratum of the exclusion of non-cows, because the form of *śābaleya* is not common to all cows.

(x): Jayamiśra formulates the point here (k. 37cd) as follows: if no universal—that is single-natured—is accepted, then, an exclusion can only be postulated based on a concrete particular (*piṇḍa*).²¹ But then, you cannot justify why the exclusion is postulated for a horse but not for a *bāhuleya*, for, both the concrete particular horse and the concrete particular *bāhuleya* are equally excluded from the concrete particular *śābaleya*.²²

Uttarapakṣa²³

¹⁹ Kās: *śābaleyādirūpopalakṣitā viśeṣā agopohasyāḷambanam bhaviṣyati*.

²³ On how these arguments reply to Kumārila’s critique, see Sin (2024), Sections 2.2 and 3.2.

[It has been objected in TS 933 that] “*na cānvayavinirmuktā*” and so forth. With respect to this [objection, Śāntarakṣita] says “*atadrūpa*” and so forth:

A unique particular—that is excluded from what is not so (*atadrūpaparāvṛttam*)—is an entity in general (*vastumātram*). This concomitance [of a word or an inferential mark] with that [unique particular] is not problematic to be made. (TS 1051)

Even though there is no real universal, still, **the concomitance** [of a word or an inferential mark] with only **the unique particular** in general (*svalakṣaṇamātreṇa*)—that is excluded from the dissimilars—is **not problematic to be made**. (TSP 1051)

[Question:] Why [is it not problematic]?

[To reply, Śāntarakṣita] says “*yasmin*” and so forth:

To explain, where the unique particular that is different from non-smoke exists, there also exists the unique particular that is excluded from non-fire. Just as in a kitchen. That [unique particular], which is different from non-smoke, exists here (= in the mountain) too. Therefore, the unique particular, which is different from non-fire [also] exists here. (TS 1052–1053)

“**Where**” (*yasmin*) means “in that place.” And here (*iha*) **exists the unique particular** which is different **from non-smoke**—indicating that [the *hetu*] is a property of the thesis (*pakṣadharmā*). “**Therefore**” (*tasmāt*) and so forth—indicating the result of the valid means of knowledge (*pramāṇaphala*). Or, it indicates that when the concomitance with the unique particular is made, the five members [of an inference] too can be indicated. (TSP 1052–1053)

And this (= the above) is said regarding a *kāryahetu*. Regarding a *svabhāvahetu*, [Śāntarakṣita] says “*asataḥ*” and so forth:

And any unique particular which is different from what is nonexistent such as human-horn, all of them (= all these unique particulars) are also excluded from what is permanent (*sthirāt*), like cognition, flame, and so forth are. And similarly, the unique particular of sound, etc. is not nonexistent. Therefore, by this [logic], there can be the

concomitance with this [unique particular] whose difference is not shown. (TS 1054–1055)

Any unique particular which is excluded from **what is nonexistent**, because it is not of the same type (*atādrūpyāt*) (= because it is not nonexistent by nature), **all of them are also excluded from what is permanent, like cognition, flame, and so forth** are. And similarly, **the unique particular of sound, etc.** would **not** have **the nature of nonexistence**. Therefore, **by this** [logic], it is not problematic to make the concomitance with this unique particular on account of not touching the distinction. And it is with respect to the reason (*hetu*) “*sattvāt*,” this **concomitance** is shown. (TSP 1054–1055)

[Objection:] If there were a concomitance with only the unique particular in this way, then, how is an inference—that has general property as its object—be established?

To reply, [Śāntarakṣita] says “*avivakṣitabhedam ca*” and so forth:

And that very [unique particular] whose difference is not intended—but not other things—is stated [by Dignāga] to be the general property (*sāmānyalakṣaṇatvena*), because [real universal] is not accepted. (TS 1056)

To explain, it has been said [by Dignāga] **that very unique particular—whose difference is not intended—is the general property**. By “*sāmānyena*” is meant “not considering the difference”; [by “*lakṣaṇa*”] is meant “**to be characterized**” (*lakṣyate*)—viz.—“to be known.” The compound “*sāmānyalakṣaṇa*” should be analyzed in this way. “**But not other things**” (*nāparam punaḥ*) refers to those which are claimed by the non-Buddhists—because they are **not accepted** [by us/by the Buddhists]. Just as it has been said [in PV III.54cd] that “on account of apprehending it (= unique particular) through its own form and through another form, the object of knowledge is considered to be of two kinds.” Similarly, another point has been said [by Dharmakīrti], namely—

“Based on (*samāśrayāt*)²⁴ the mere entity that is excluded from those which do not have that form, an inferential mark is said to have the universal as its scope, because difference is not established.” (≈ PVin II.8)

²⁴ PVin 2.8 reads *prasāadhanāt*.

Therefore, the concomitance of a word and an inferential mark too, is said to be only with the unique particular. And furthermore, for us, an inferential mark is ascertained to be absent in the dissimilar cases (*vipakṣe*) not by mere non-observation, but rather, by the special type of non-apprehension (*anupalambhaviśeṣāt*). This is the intended meaning. (TSP 1056)

And it has been objected [in TS 937] that “*śābaleyāc ca bhinnatvam*” and so forth. To reply, [Śāntarakṣita] says “*śabalāpatyatas*” and so forth:

Provided that the difference from a spotted cow is the same for both a black cow and a horse, why does [the real universal] cowness, by virtue of the exclusion of horses (*turaṅgaparihāreṇa*), abide [only] in those [spotted cow and so forth]? (TS 1057)

To explain, you are entitled to say this: If **the difference** from a spotted cow is the same for [both] **a black cow and a horse**, then **how does [the real universal] cowness, on account of excluding a horse, abide only in those** spotted cow and so forth, [but] not [also] in a horse? (TSP 1057)

One might answer/object that, what has to be said with respect to that? For, only a spotted cow and so forth, but not a horse and so forth, are capable of manifesting [the real universal] cowness (*gotvasyābhivyakta*). Therefore, it (= *gotva*) abides only in them (= a spotted cow, etc.), [but] not elsewhere. And it is improper to ask why only those spotted cow and so forth, but not other things, are capable of manifesting it (= *gotva*), because this is restricted by the intrinsic nature of real entities (*vastusvabhāvapratiniyamah*); and one is not entitled to question about the intrinsic nature of real entities, since the restriction of their different intrinsic natures is accomplished by their own uninterrupted causes.

To reply, [Śāntarakṣita] says “*tasya vyakta*” and so forth:

If it is considered [by you] that only that (the spotted cow, etc.) [but not the horse] is by nature capable of manifesting it (= the real universal cowness), then [according to us, only] it (the spotted cow, etc.), not the horse, is capable of producing the same judgment (*tulyapratyavamarśe*). (TS 1058)

“It” (*tasya*) refers to [the universal] cowness. “Only that” (*sa eva*) means [only] a spotted cow and so forth, but not a horse. If it is so, then even though there is difference and there is no universal, [still,] only the spotted cow and so forth, but **not the horse**, are **capable of producing the same judgment**. This theory of ours, [therefore,] is in fact not contradicted. (TSP 1058)

[Question:] What would ensue from this?

To reply, [Śāntarakṣita] says “*tādṛk*” and so forth:

And in which real entity the judgment of the same kind exists, the *apoha* from non-cows takes place with respect to that [the real entity], even though there is no real universal of cow. (TS 1059)

In which real entity—e.g., a spotted cow—the judging cognition of the same kind, “this is a cow,” “this is a cow,” arises, the *apoha* from non-cows that is by nature a reflected mental image takes place with respect to only that [real entity], even though a real universal of cow does not exist. (TSP 1059)

Tattvasaṃgraha(pañjikā) 933–937, 1051–1059
